ENERGY MANAGEMENT SYSTEMS

THE FACT: Energy is in short supply!

THE CHALLENGE:

Ensuring maximum efficient and effective utilization of what is available.

THE SOLUTION: ZWS ISO 50001:2011 Energy management systems (EnMS) – Requirements with guidance for use.

SAZ, your national standards body (NSB) has published **ZWS ISO 50001: Energy management systems – Requirements with guidance for use**. This is an adoption of the International Organization for Standardization (ISO) standard.

The standard specifies requirements for establishing, implementing, monitoring and improving on EnMS, whose purpose is to enable an organization to follow a systematic approach in achieving continual improvement of energy performance including energy efficiency, energy use and consumption. It is compatible with ZWS ISO 9001 Quality Management Systems (QMS) and 14001 Environmental Management Systems (EMS). It is a generic standard and applies to all forms of energy.

Benefits include:

- Better usage of existing energy – a “must do” for the Zimbabwe’s economy revival
- Improve energy management leading to greenhouse gas emissions reduction – mitigate climate change.
- Can be integrated with other management system standards such as environmental, health and safety
- Promote energy management best practices
